

The RT30 Residential Chlorine Genie unit is specifically designed to deliver all of the chlorine needed for a typical residential pool. A single unit can support pools up to 50,000 gallons creating the Ultimate Pool Water experience.

Imagine swimming in water that has been softened, descaled, pH balanced and sanitized all without the need for harsh chemical, toxic additives, corrosive salt water, or dangerous irritants. The Chlorine Genie is a stand-alone piece of equipment that works together with your pump, filter and heater. It is one of the 4 core pieces of equipment that should be installed on every pool.

- **Genie uses softened tap water, so cells stay cleaner... requiring less service.**
- **Genie's salt goes right into the brine tank... not in the pool.**
- **Genie uses a small amount of tap water... not hard pool water.**
- **Genie manufactures its own acid and base products...eliminating pH problems.**
- **Genie makes chlorine every day... reducing pump run times and energy consumption.**

Store bought chlorine can contain as much as 90% other chemical substances (inert ingredients) that can lead to irritation, asthma problems, allergic reactions, hair color changes, burning eyes, itchy skin, dryness, related health problems, etc. The chlorine generated by the Chlorine Genie is a pure product and does not contain any of these irritants. The soft feeling of the water is amazing and provides a clean, refreshing swimming experience without all the harsh chemicals, smells, or additives

## Swim in the Ultimate Pool Water

- 
- No more red eyes
  - No more dry, itchy skin
  - No more faded swim suits
  - No more nasal irritation
  - No more green hair

- Salt is added to the unit (not the pool).
- Chlorine Genie can operate INDEPENDENTLY from the filtering system.
- A manual pH valve allows user to adjust pH without using commercial chemicals.
- Cells are easily cleaned without being removed.
- Since the cell is submerged in softer brine water, the Genie uses very little electricity.
- Genie has a built-in water softener that removes harmful mineral from incoming water.
- Is easily installed without making changes in the filter system.
- Genie is environmentally friendly and is not affected by saltwater regulations.

# Modernize Your Pool Maintenance

---

- Extend the life of your pool equipment
- Eliminate corrosive salt from your water
- No more damage to your plaster, coping, and hardscapes

Most pool professionals agree that dumping hundreds of pounds of salt in a swimming pool is environmentally a bad idea. In some areas, it is against the law. Salt is corrosive and can damage pool equipment, the pool surface, and surrounding landscaping and hardscaping. Instead of putting 800lbs of salt into a swimming pool, Chlorine Genie requires only 80lbs of clean salt and it is added directly to the unit—the salt never enters the pool water.

By putting the salt into the Chlorine Genie unit instead of the pool, evaporation, reaction with other chemicals, and reaction with all of the metal in your pool equipment is eliminated.

If the pool does not have a salt system, or if the cell on the system has deteriorated, the typical pool consumes 3-5 gallons of chlorine per week. That is over 200 gallons per year. That chlorine, plus acid to balance the pH of the

pool, has to be manufactured at large factories, transported by truck or train to local markets, bottled, then transported by pool maintenance companies to your pool...every week.

The Chlorine Genie manufactures all of the chlorine needed by a pool and can even be used to adjust the pH of the pool eliminating the need to transport, store, and use muriatic acid or other products on a weekly basis.

## Do Your Part to Help the Planet

- No more transportation and storage of dangerous chemicals
- Clean Salt and Fresh water are the only inputs
- Produce just what your pool needs, no waste
- Pure chemicals with no additives
