

Automation meets Innovation

Automation that thinks for itself. And pays for itself.

The Attendant

TRANSFORM YOUR OASIS

The Attendant is designed to improve all aspects of the pool ownership experience. Our cloud based automation system is continually monitoring your equipment, water quality and temperature to determine the most energy efficient way to have your poolside oasis ready when you are.

Giving you back time, removing the worry of day-to-day pool preservation and communicating with you along the way are the fundamental differences that make our patented technology stand out from the competition. All the while saving you money and lowering your overall environmental impact.

Minimize your energy impact and costs

SERIOUSLY, THIS PAYS FOR ITSELF

The Attendant is a vendor agnostic automation system, completely compatible with the Big 3, that has been engineered to mindfully manage the energy usage of your entire pool system. It marries the individual capabilities of each piece of pool equipment together to tune your pool to be as efficient as possible. This benefits the homeowner by driving energy costs down, in addition to lowering the overall environmental impact of the pool system. Think of it as the Google Nest for the pool industry.

Existing automation allows you to schedule a time to turn your heater on...but would the sun have naturally warmed the water to your desired temperature without needing to waste the electricity and gas of the heater? Our patented technology looks at your desired temperature, the weather forecast and energy rates to determine the cheapest way to get your temperature right. Your savings could be in the thousands over the span of a year. Plus isn't it just nice to know how much it costs to keep your pool at a specific temperature. Making informed decisions for your household budget puts you in control.

Water quality

WHEN YOU DON'T HAVE A PhD

Ensuring your pool water is filtered and balanced are some of the basic functions that must be performed to create an enjoyable and safe swimming experience. Managing sanitizer, filtration, pH balance and alkalinity can be quite challenging, and used to involve many trips to the pool store. Let The Attendant take on these daunting chores for you.

The Attendant + Chemistry will automatically determine how much filtration is necessary and time the work in the most energy efficient way. From there, The Attendant + Chemistry will monitor the amount of sanitizer and pH in your pool and dispense chemicals to address any imbalances. No one wants algae in their pool. The Attendant + Chemistry can react to algae or extra heavy pool use by automatically boosting sanitizer and filtration run times.

An interface with the user in mind

INTUITIVE WITH A SPLASH OF PLAYFULNESS

The Attendant mobile app was designed with ease at its core. Providing a feature first view of the pool and spa system to make it much easier for end users to understand what they are turning on or off. This is a dramatic departure from how legacy pool automation manufacturers built mobile interfaces to date. The Attendant user interface is simple enough to allow anyone to use it. Your guests, your parents, even your teens. No matter who uses the system, The Attendant prevents any dangerous conditions that could damage your equipment or drain your spa. If you've ever made rookie mistakes with your pool, this prevention is priceless.

Bad stuff happens

EYES ON ALL THE TIME

As a homeowner, you're not always standing by watching over your pool, and neither is your pool professional. Our patented technology allows us to use existing equipment on the pad to determine when a problem occurs. The Attendant will proactively notify you when...

- filters are dirty
- pipes are obstructed
- pumps are not working
- water levels are low
- valves are malfunctioning
- salt cells are not working

These are some of the many instances that can take place and may go undetected, causing harm to your investment. In critical situations, The Attendant can dispatch your Pool Professional automatically in order to preserve your oasis.

Historical equipment logs and real time access to each individual piece of equipment is made available to assist in troubleshooting. If equipment should require hands on adjustments, a service technician can be scheduled directly through The Attendant app.

Any equipment, in any configuration

WE MEAN ANY!

From pumps, heaters and actuators, to lighting and salt cells, The Attendant can control and efficiently monitor equipment of existing manufacturers in the industry. With The Attendant, we natively integrate with any and all equipment. You can truly intermix any pump, heater, salt cell and light from manufacturers like Pentair, Hayward and Jandy. Never getting yourself locked into a vendor again.

Shouldn't automation accommodate your plumbing, instead of your plumbing accommodating your chosen automation system? The Attendants patented visual configuration tool allows you to define any and all possible plumbing configurations with ease. The tool automatically determines all the unsafe scenarios for you so you don't waste time configuring them, and they are not forgotten.
